

QUESTION

1. A company is considering a new investment project. The project requires an initial outlay of \$100,000 and is expected to generate cash flows of \$30,000 per year for 5 years. The company's cost of capital is 10%. Calculate the Net Present Value (NPV) of the project.

2. A company is considering a new investment project. The project requires an initial outlay of \$100,000 and is expected to generate cash flows of \$30,000 per year for 5 years. The company's cost of capital is 10%. Calculate the Internal Rate of Return (IRR) of the project.

3. A company is considering a new investment project. The project requires an initial outlay of \$100,000 and is expected to generate cash flows of \$30,000 per year for 5 years. The company's cost of capital is 10%. Calculate the Payback Period of the project.

4. A company is considering a new investment project. The project requires an initial outlay of \$100,000 and is expected to generate cash flows of \$30,000 per year for 5 years. The company's cost of capital is 10%. Calculate the Profitability Index (PI) of the project.

5. A company is considering a new investment project. The project requires an initial outlay of \$100,000 and is expected to generate cash flows of \$30,000 per year for 5 years. The company's cost of capital is 10%. Calculate the Modified Internal Rate of Return (MIRR) of the project.

6. A company is considering a new investment project. The project requires an initial outlay of \$100,000 and is expected to generate cash flows of \$30,000 per year for 5 years. The company's cost of capital is 10%. Calculate the Weighted Average Cost of Capital (WACC) of the company.

7. A company is considering a new investment project. The project requires an initial outlay of \$100,000 and is expected to generate cash flows of \$30,000 per year for 5 years. The company's cost of capital is 10%. Calculate the Break-Even Point of the project.

8. A company is considering a new investment project. The project requires an initial outlay of \$100,000 and is expected to generate cash flows of \$30,000 per year for 5 years. The company's cost of capital is 10%. Calculate the Sensitivity Analysis of the project.

9. A company is considering a new investment project. The project requires an initial outlay of \$100,000 and is expected to generate cash flows of \$30,000 per year for 5 years. The company's cost of capital is 10%. Calculate the Risk-Adjusted Discount Rate (RADR) of the project.
