Figure 1. Schematic diagram of the experimental setup. The subject is seated at a distance of 50 cm from the screen. The screen displays a target (a red dot) and a starting position (a black dot). The subject is instructed to move the hand from the starting position to the target position. The distance between the starting position and the target position is 10 cm. The subject is instructed to move the hand as fast as possible. The time taken to reach the target is recorded. The experiment is repeated 10 times for each subject.

Figure 2. Graph showing the relationship between the distance between the starting position and the target position (x-axis) and the time taken to reach the target (y-axis). The data points show a linear relationship, indicating that the time taken to reach the target increases linearly with the distance between the starting position and the target position.
