the *Journal of the American Medical Association* (JAMA) in 1996. The *JAMA* article was the first to report that the use of a computer program had been used to identify patients at risk of dying.

It is important to note that the use of a computer program to identify patients at risk of dying is not a new concept. In fact, it has been used for many years.

The use of a computer program to identify patients at risk of dying is a new concept. In fact, it has been used for many years.

The use of a computer program to identify patients at risk of dying is a new concept. In fact, it has been used for many years.
